PROFILE SUMMARY

AI & Data Science undergraduate at B.M.S. College of Engineering with strong foundations in Machine Learning, Full-Stack Development, and Data Analytics. Experienced in building end-to-end AI applications, credit risk scoring models, and interactive KPI dashboards using Python, Scikit-learn, OpenCV, React, and SQL. Seeking opportunities to apply software engineering and data science capabilities to solve complex real-world challenges.

EDUCATION

B.E. in Artificial Intelligence and Data Science | B.M.S. College of Engineering 8.28 (CGPA) | 2028
Class XII (KSEAB) | Prerana PU College, Hubballi 93.00% | 2024
Class X (SSLC) | S G Shintri English Medium School 95.68% | 2022

WORK EXPERIENCE

AI/ML Internship Trainee | FlyRank AI (*Virtual Trainee*) July 2026 – Present

- Built machine-learning models and evaluation pipelines through industry project-centric engineering paradigms.
- Applied Python, Scikit-learn, and data preprocessing techniques across predictive modeling and real-world ML workflows.

Data Science & Analytics Intern | Future Interns (*Summer Intern*) June 2026 – July 2026

- Executed Exploratory Data Analysis (EDA) pipelines on commercial datasets to extract actionable business insights.
- Developed interactive Tableau dashboards featuring KPI tracking, customer churn analysis, and sales funnel metrics.

TECHNICAL SKILLS

Programming Languages : Python, Java, C, SQL
Frontend and Backend : HTML/CSS, JavaScript, React.js, Node.js, REST APIs, Streamlit, Firebase
Machine Learning & CV : Scikit-learn, Pandas, NumPy, OpenCV, Matplotlib, Caffe DNN
Databases & Tools : MySQL, MongoDB, Tableau, Git, GitHub, VS Code, Jupyter Notebook
Core CS & Soft Skills : Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP

PROJECTS

AegisCR – AI-Powered Credit Risk Platform | [GitHub](#) | [Live Demo](#) May 2025
Engineered an end-to-end credit risk evaluation platform combining loan default prediction, OCR document verification, geospatial collateral valuation, and Explainable AI (XAI) feature importance analysis using Python, Scikit-learn, and Streamlit.

AAROHA – Human Operating System | [GitHub](#) Feb 2025
Architected a centralized AI decision engine designed to guide users in making intelligent, data-driven decisions across personal finance, education, and career paths utilizing modular screens, REST APIs, and machine learning models.

Business & Sales Analytics Dashboards | [Sales](#) | [Churn](#) | [Funnel](#) June 2026 – July 2026
Analyzed retail e-commerce datasets using Tableau and Excel to engineer multi-tier interactive dashboards tracking critical business KPIs (Total Revenue, Customer Churn, and Marketing Conversion Rates).

Age & Gender Detection System | [GitHub](#) March 2025
Built a real-time computer vision system using OpenCV and deep Caffe neural networks for accurate face detection, age range estimation, and gender classification via live camera feeds.

CERTIFICATIONS

Nutanix Certified Associate 6 (NCA 6) | Nutanix 2025
Machine Learning Fundamentals | Infosys Springboard 2025
Python Programming | Great Learning 2025
